                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LACLA
                                                                                                                                                                                                                                                                     Kiwaki M., Ikemura H., Shimizu-Kadota M., Hirashima A.;

"Molecular characterization of a cell wall-associated proteinase g
from Streptococcus lactis NCD0763.";

Mol. Microbiol. 3:359-369(1989).

-I- FUNCTION: PROTEASE WHICH BREAK DOWN MILK PROTEINS DURING THE
GROWTH OF THE BACTERIA ON MILK.

-I- CATALYTIC ACTIVITY: ENDOPEPTIDASE ACTIVITY WITH VERY BROAD
SPECIFICITY, ALTHOUGH SOME SUBSITE PREFERENCE HAVE BEEN NOTED,
E.G. LARGE HYDROPHOBIC RESIDUES IN THE P1 AND P4 POSITIONS, AN
PRO IN THE P2 POSITION. BEST KNOWN FOR ITS ACTION ON CASEINS,
ALTHOUGH IT HAS BEEN SHOWN TO HYDROLYSE HEMOGLOBIN AND OXIDIZE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ol-Apr-1990 (Rel. 14, Created)

FUNCTION: PROTERSE WHICH BEEAK DOWN MILK PROTEINS DURING THE GROWTH OF THE BACTERIA ON MILK.

GROWTH OF THE BACTERIA ON WILK.

CATALYTIC ACTIVITY: ENDOPEDIIDASE ACTIVITY WITH VERY BROAD SPECIFICITY, ALTHOUGH SOME SUBSITE PREFERENCE HAVE BEEN NOTED, E.G. LARGE HYDROPHOBIC RESIDUES IN THE PLAND P4 POSITIONS, AN PRO IN THE P2 POSITION. BEST KNOWN FOR ITS ACTION ON CASEINS, ALTHOUGH IT HAS BEEN SHOWN TO HYDROLYSE HEMOGLOBIN AND OXIDIZE
                                        SUBCELLULAR LOCATION:
SIMILARITY: BELONGS TO
SUBTILASE FAMILY.
